Professional Summary

I am an undergraduate in Business Information Technology (BSc Bournemouth). I have covered elements of business infrastructure, networking, object-oriented-programming, database management, data mining, cloud development, systems and design and more.

I am very interested in full stack web development, regularly following tutorials to improve my knowledge. I am a strong-minded and competent team player. I am reliable, focused and determined to get the job done.

Relevant Tech Competency (Other industry-relevant skills are listed on my website)
.NET (MVC, a static frontend or a framework), C#, Windows Server, SQL

I have experience using this stack personally and professionally. I have experience with Umbraco and Sitecore but have not been able to develop with Sitecore due to licensing requirements. I have also studied the .NET Core framework to be prepared for future projects. I have studied courses regarding the fundamentals of .NET and C#.

JavaScript, React, MongoDB, ExpressJS, NodeJS (Full M.E.R.N. Stack)

I am largely self-taught in this domain and have spent a long time looking into the common 'MERN' stack. I have also spent many hours studying JavaScript fundamentals. I am looking to learn Angular soon.

HTML5, CSS3, JSON, XML, RESTful APIs, Server Codes, HTTP Codes.
I have the fundamental working knowledge for these technologies.

Relevant Experience

Greenwood Campbell – Bournemouth – 02/07/2018 - 20/09/2019 – Support Developer
- I was responsible for maintaining legacy projects and helped on some new projects.
- Handling client support requests (bug reports, change requests, new quotes).
- Full stack, with front end work in HTML, CSS and JavaScript and back end work using C# / .NET / SQL mainly.
- I have experience using and developing Umbraco websites.
- I have developed Chatbots & Voice Assistants also.

LV= – Bournemouth – 22/07/2018 - 19/09/2019 – Content Editor
- Subcontracted by Greenwood Campbell working for LV=. This involved content work using Sitecore and Continuity C5 CMS. Wireframe creation, content changes and Sprint planning.
